

When the roof is the main thing

In a project imbued with good design it's also of great importance with the details, which complete a beautiful building. Here the roof hood becomes a natural part of the architecture.

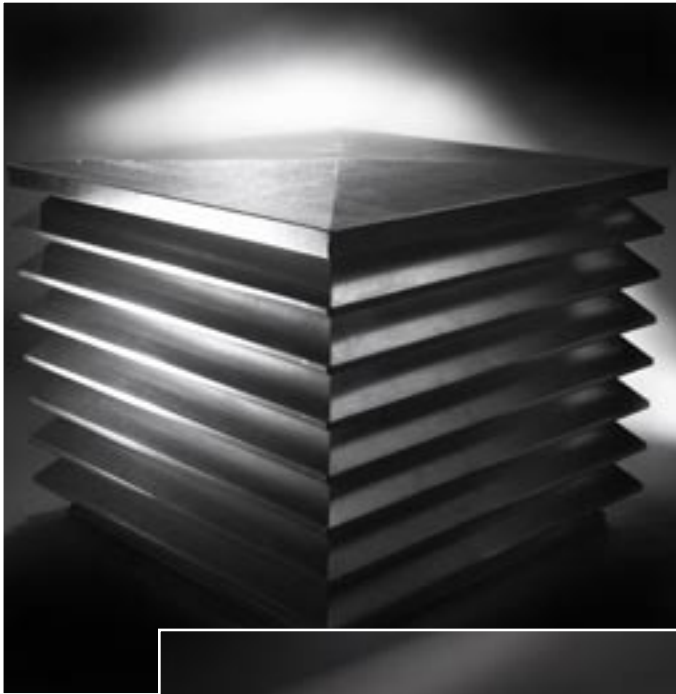

Now Lindab introduces a complete assortment of roof hoods for you, who value the aesthetics. Roof hoods with ribs is only one example from our new

assortment. To the right you can see two different types. Another example is roof hoods with angled top edge, which can be manufactured to the same angle as the roof. Here you can see the two different products.

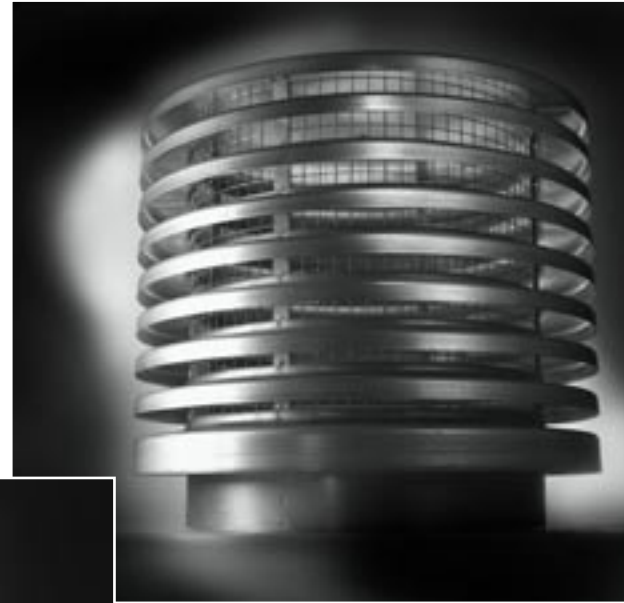

Our product-line includes roof hoods for both outdoor air and extract air. Now is Lindab's ventilation assortment even wider.

Please, let us give you some inspiration.

*LHR is an aesthetic pleasant rectangular roof hood with ribs. It's mainly designed for outdoor air, but can also be used for extract air when there is no risk for backflow into the house.*

*VHL is a circular roof hood with ribs. It has well thought out design. The hood can be used both for outdoor air and extract air if there is no risk for backflow.*

*HV, a circular hood for both outdoor air and extract air. The angle can be manufactured to the angle of the roof, but the hood is also produced with a horizontal profile.*

*HVR, a rectangular hood for both outdoor air and extract air. Is also available with horizontal profile.*

Choose between four different versions
